TREADMILL

for rehabilitation of patients with motor pathology

Treadmill «Biokinekt» is custom designed for the rehabilitation of patients with musculoskeletal disorders for restoring walking skills and muscle tone of the lower limbs

Equipped with all necessary functions and programs for training

Telescopic handrails with 6 levels of height adjustment are provided comfortable support during training.

Absorbing running belt reduces the load on the joints and increases the level of comfort during training.

Low starting speed and smooth adjustment - 0.1km/h allows to conduct safe and quiet training.

Emergency stop button on the handrails provides the immediate stop of simulator and turning off the training program.

Integral-hp motor of 2.5 hp provides work with a weight up to 150 kg.

The function of connecting to a PC via USB allows to conduct training with biofeedback.

Biomechanical sensors «Bisens»:

- heart rate registration
- ergometry function
- registration of the pelvis position and its movement
